

How to create virtual desktop in CCS

The virtual desktop is a simulated operating environment of the desktop, which is useful for testing any risky application and websites.

To create a virtual desktop open the endpoint in which CCS is installed.

STEP[1]: Go to the path where CCS is installed and executables are available.

For Example:

In this endpoint the installed location is

"C:\Program Files\COMODO\COMODO Internet Security"

STEP[2]: Choose the executable file "virtkiosk.exe" in that location-->click "open".

For Example:

"C:\Program Files\COMODO\COMODO Internet Security\virtkiosk.exe"

STEP[3]:Created virtual desktop will look like as shown below

STEP[4]: Virtual desktop has "Comodo virtual desktop pane" on the right side.

It consists of two options

(i) **X** option-Close virtual desktop

(ii) **↔** option-Helps to switch between "Normal windows" and "Virtual desktop"
