

How to disable the Remote Control feature

- The remote control application lets admins take-over endpoints to solve issues, install third party software and run system maintenance.
- This tutorial explains how to disable remote control in the Endpoint Manager. This will prevent any admin from assuming direct control of managed endpoints on the profile.
- You can quickly re-enable the feature if required.

Process in brief:

- Login to Xcitium
- Click 'Applications' > 'Endpoint Manager'
- Click 'Settings' > 'Portal Set-up' > 'Extensions Management'

- Switch off 'Remote Control by ITarian':
- The 'Remote Control' option will disappear from the device list and from the device details page:
