How to get automated Kill chain report of malware files from valkyrie

Kill Chain report is used for providing the full description of the malware file that is available on the network. Now the reports are also available for the users who are not holding the Valkyrie Dashboard functionality.

Step [1]: For login to the Valkyrie dashboard, Go to \rightarrow valkyrie.comodo.com. Click ' Sign In \rightarrow ' button it will navigate to a login page, provide the credentials of the c1 account. It will display all the malicious file entries since it has been enabled with the default option as " Your Recent Analysis Request ".We can able to view the account by choosing the particular account which has been provided under the filter options. This page will display the malicious file detail entry up to 25 entries as a default.

SIGN IN 🗲

Valkyrie Valkyrie is a file verdict system. Different from traditional signature based malware detection techniques Valkyrie conducts several analysis using run-time behavior and hundreds of features from a file and based on analysis results can warn users against malware undetected by classic Anti-Virus products.
